This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible from GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Overlapping Sequences:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens (human)
                                                                                                                                                                         Sequence Validation:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Center project Information
Center project name: chr-3
Center clone name: RP13-546I2 (bc0820)
Sequencing vector: plasmid; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Chemistry: 177210 bases at least Q40
Consensus quality: 177313 bases at least Q30
Consensus quality: 177334 bases at least Q20
Insert size: 177334; sum-of-contigs
This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Web site: http://www.genome.washington.edu

Chemistry: Dye-terminator Big Dye; 6% of reads Assembly program: Phrap; version 0.99019 Consensus quality: 19725 bases at least Q30 Consensus quality: 19725 bases at least Q30 Consensus quality: 197275 bases at least Q30 Insert size: 197279; sum-of-contigs Ouality coverage: 8.2x in Q20 bases; sum-of-contigs Overlapping Sequences: 5': RPI1-9188 ([WGC:bc0216] AC026349 3': CTD-2563A18 ([WGC:bc0730)) Sequence Quality Assessment: This entry has been annotated with sequence quality estimates computed by the Bhrap assembly program. All manually estited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than leastly-base quality values are not generally visible from the General Clark file format but are available as part of this entry's ASN.1 file. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeate; all regions were covered by at least one plasmid subclone; and the assembly was confirmed by restriction digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cuteff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted remaining discrepancies between the experimental and predicted one appear in the cable. There are no significant remaining discrepancies between the experimental and predicted one appear	niver niver A., R D., R D., R D., R D., R One C one C

* NOTE: This is a 'working draft' sequence. It currently consists of 26 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced to be the submittor.

* This sequence will be preserved.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           seq length: 0

Normalization and subtraction of cap-trapper-selected cDNAs to
prepare full-length cDNA libraries for rapid discovery of new
genes. Genome Res. 10 (10), 1617-1630 (2000)
